

Capp new ecopipette™

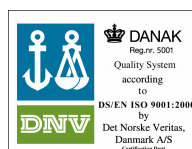

With the new Capp ecopipette™ strong considerations to environmental aspects have been taken, ranging from the use of degradable or reusable components, recyclable packaging and the offering of a trade-in programme with an environmentally safe waste discharge of old pipettes.

The ecopipette™ is ideally balanced and has a large ejector pad which makes tip ejection most comfortable. A clearly visible colour coding and other remarkable features include the lowest force needed for aspiration and blow-out, lockable volume controller requiring 50% less turns and double o-rings for optimal tip seal.
