

MAST Launch Hain GTQ-96 Thermocycler

MAST Group is pleased to announce the launch of the Hain Lifescience GTQ-96 thermocycler. The instrument offers the following benefits:

- **User-friendly:** PCR programs for processing the **GenoType®** and **GenoQuick®** test systems are already stored and can be accessed immediately.
- **Ease of use:** a clearly arranged colour touch-screen enables straightforward simple routine operation and fast programming. The USB port facilitates the access and storage of programs from a USB memory stick.
- **High precision:** four temperature control sensors and an optimal temperature control through eight peltier elements assure exact concordance between the actual-temperature and the set-temperature. Excellent block uniformity and fast temperature changes with high precision are therefore ensured.
- **Secure data management:** detailed GLP reports are stored for all performed PCR programs. These reports can be accessed and saved on an USB memory stick. This ensures secure data management at any time.

The GTQ-96 will only be available via MAST Group in selected Countries, please contact your local representative for details.
