

## MASTABLOT P9

MASTABLOT P9 is a line blot assay for the detection of IgG autoantibodies from either plasma or serum.

Complementing the other MAST Group autoimmune ranges (MASTAZYME & MASTAFLUOR), the MASTABLOT P9 is a highly specific confirmation assay for autoantibodies: AMA-M2, dsDNA, Jo-1, SS-A, SS-B, SM, SM/RNP, SCL-70 & CENP-B.

Ready to use reagents and simple storage conditions reduces assay preparation and hands on time. Confidence in results is ensured by the inclusion of serum & cut-off controls.

For further information on the MASTABLOT P9, [please click here](#).
