

## HPLC, Spectroscopy Grade Solvents

Loba HPLC Grade Solvents are glass distilled, filtered through 0.02micron filter, and undergo stringent specification testing. HPLC Grade Solvents are manufactured especially for use with HPLC and UV spectroscopy.

## HPLC and UV spectroscopy applications

- UV absorbance/transmittance, moisture, non volatile matter, fluorescence impurities and assay are carefully controlled.
- These products undergo stringent specification testing in our analytical laboratory
- Guarantee a high assay level and a very low level of evaporation residue and water contents
- All these solvents are bottled under nitrogen atmosphere in order to maintain an optimum quality level during storage
