Stuart[®] Hotplate Stirrers

Cole-Parmer are stirring up the scientific community with their NEW innovatively customisable Stuart[®] Hotplate Stirrers!

For the very first-time, and with the use of an [online configurator](#), users can customise their own colourful, sleek and technology rich unit. Individuals can select from a variety of parameters, including; model type, interface, surface, and colour. This new tool means that each unit can be designed to bespoke specifications, built for its specific application, and is personal to the owner.

The range comprises three versions: **hotplate, stirrer or hotplate stirrer**, and three interfaces to choose from: **Analogue, Digital and Premium**, with the latter boasting enhanced versatility. The former two are available in three colours; white, black, and blue, whilst the Premium is supplied in an additional five colours, namely; pink, avocado, tangerine, red and ultraviolet.

The **Analogue** version has an interface with LED arrays display showing temperature and speed and offers the same quality of built as the two higher end versions. The **Digital** version offers the same LED speed array in addition to an upgraded digital 7 segment temperature display. The **Premium** version offers the ultimate level of control in the form of a full-colour TFT digital 7 segment display showing both temperature and speed, and for the first time enables advanced programming functions and a built-in timer. These features provide researchers with improved control over visibility and accuracy. All three versions offer minimal storage and footprint, accommodation for a retort stand to receive an external temperature probe (PT100 temperature probe included on Premium), whilst an independent hot light LED clearly shows when instrument temperature is over 50°C, making it safe even when the unit is unplugged. These latest additions mean researchers have even greater control over their experiments and processes, while making their lab safer.

"The Stuart range has always been focused on providing reliable, precise equipment that meet requirements across a range of applications. With the introduction of new customisable Stuart Hotplate Stirrers we are pleased to be able to offer users the chance to design a unit to their specifications, which will give them exceptional levels of control, whilst being suited to their specific needs", commented Neil Pomeroy, New Product Development Director, *"Choice in the lab is here, and marks a refreshing turning point for the development of lab equipment."*

Each unit is robust and has a host of user-friendly features that will keep individuals safe:

- chemically toughened glass interface
- glass ceramic or ceramic-coated aluminium hotplate
- mains independent hot-warning light
- temperature sensor compatibility (PT100 temperature probe included on Premium)
- Programming with built-in timer (Premium version only)
- 50 – 2000 rpm

Notes to editors

Since 1955, Cole-Parmer has been a leading global source of Fluid Handling, Test & Measurement and Biosciences products, instrumentation, equipment and supplies. We are proven experts in the fields of temperature measurement, spectroscopy, fluid handling, sample preparation & handling and chromatography. Our products & instruments are used extensively in the industrial, pharmaceutical, life sciences, environmental and food & beverage industries. Our portfolio of unique industry-leading brands includes Argos Technologies®, Digi-Sense®, Electrothermal®, Environmental Express®, Ismatec®, Jenway®, Kinesis®, Masterflex®, Oakton®, PCRmax®, Stuart®, Techne®, TELOS®, Traceable®, Vaplock™ and partner with a number of key suppliers with industry leading products.

Cole-Parmer is globally renowned for our highly responsive customer service and experienced Application Specialists providing exceptional technical support. Pipette Service and Calibration and Instrument Service facilities are also available in our North America and European locations.
