

Meet the game changers for green extraction of natural products

The use of microwave technology for solvent-free extraction from botanical material was pioneered by Milestone years ago, with the ultimate goal to offer a more up-to-date and “green” approach to this application. The innovative microwave process has been adopted by several industries, gradually moving from research labs to production plants. Milestone’s long-standing commitment to this technology has now led to the **ETHOS X 2.0** and **ETHOS XL**, two dedicated solutions for craft applications as well as medium and large-scale processors. Our next-generation of microwave technology systems enable to extract live botanicals/ natural products faster than alternative processes such as steam distillation, CO₂, and hydrocarbon extraction. The best part, the systems offer safe and scalable solutions for processors of different size.
