

PRESS RELEASE

Water-i.d. invests EUR 3 million in new premises

Shortly before its 20th company anniversary, Water-i.d. GmbH in Eggenstein near Karlsruhe (Germany) has moved into an extension building at the previous company location and thus set the course for continuous growth.

With the extension of the existing building, which cost around 3 million EUR, Water-i.d. is expanding its capacities by a further 1,020 m² of production, storage and office space, thus taking into account the extremely positive development of the company.

The expansion of the company also took into account sustainable construction (KfW 55) and renewable energies through the installation of a solar system covering the entire roof of the new building.

Water-i.d. produces more than 100 million blistered reagent tablets, so-called powder pillow reagents, liquid reagents and also calibration solutions for electrochemistry at the Eggenstein site every year.

The packaging of orders, and thus also the warehousing, also takes place at the Water-i.d. headquarters in Eggenstein.

In addition to the production of reagents, warehousing and the packaging of orders, the head office is also home to the company's own laboratory for the development and quality control of reagents produced in-house, as well as the IT department, which is responsible, for example, for the LabCOM app/software/cloud and the programmes running on the Water-i.d. photometers.

Water-i.d. has made a strong impact on the water analysis industry over the last 20 years, mainly through innovative solutions. For example, Water-i.d. was the first manufacturer in this segment to produce reagent tablets in convenient push-through blisters and was also the first company to offer photometers with parallel wavelength technology as well as wireless connectivity to a powerful software/app/cloud.

The PoolLab 1.0 photometer alone for the private and public pool market enjoyed a total of 48,000 new users in 2021. The PrimeLab 2.0 photometer, which replaced the PrimeLab 1.0 in December 2021, features 18 parallel wavelengths, a 5.5" colour HD touch display, WiFi, USB and Bluetooth.

Water-i.d. distributes its instruments and reagents for water, oil and lubricant analysis to over 100 countries worldwide.
