

BEL Engineering is an Italian manufacturer of electronic precision Balances and scientific instruments, headquartered in Monza, Italy, and branch offices in Shanghai, China, and Sao Paulo, Brazil.

Since 1978 we have been producing over 300 balance models: from entry-level balances, precision balances, moisture analyzers, portable balances, and platform balances up to trade-approved, analytical, and high-end semi-micro balances.

BEL Engineering is now proud to present the brand-new MU 66 Microbalance that meets all technical and quality requirements demanded by Lab weighing professionals.

MU 66 features a maximum capacity of 6,1g with accurate readability up to 0.001 mg. It comes with an antistatic ionizer and features a wide range of embedded functions. Also, worth pointing out is the double round glass windshield which provides extra protection against temperature variations and disturbances in general.

Other features:

1. 5-inches touch screen display
2. GLP Compliant
3. Efficient database: it enables users to store and recall data and results while using other functions
4. Automatic internal calibration
5. Supplied with an external Ionizer to eliminate static charges
6. Huge range of embedded functions including formulation
