

## New LabTech Concentrator Multivap 10

On the wake of the wide success of the MultiVap 8 we are proud to announce the release of the NEW MultiVap 10.

Always sensitive to the market requirements we have realized a larger model that features an unmatched combination of speed, accuracy and capacity, dramatically improving the throughput of the lab.

Some improvements have been brought such as a user-friendly interface and the bath internally covered in PTFE for better insulation.

Thanks to the release of the NEW MultiVap 10 the range now includes 4 models capable of virtually solving the needs of any lab:

MultiVap 6 (previously called E.T.): manual, for 40 mL tubes.

MultiVap 8: automatic, for 50 and 200 mL tubes.

MultiVap 10: automatic, for 50 and 200 mL tubes.

MultiVap 54 (also called the Game Changer due to its unique features): automatic for 54 standard 10 mL tubes plus numerous other sizes, thanks to customizable racks.

See and download the NEW brochure [here](#)

Last but not least, let us underline that LABTECH is the ONLY COMPANY that can supply the combination “concentrator plus gas generator”. The combination offers an outstanding price/performance ratio.

The perfect match is MultiVap 8 (or MultiVap 10) plus the LN12 and MultiVap 54 plus the LN25.
