

Presentation of New Products at ARABLAB 2019

Muffle furnace L 15/14 up to 1400 °C

Ashing furnace L 40/11 BO

Nabertherm with 500 employees worldwide have been developing and producing industrial furnaces for many different applications for 70 years. As a manufacturer, Nabertherm offers a wide and deep range of furnaces worldwide. 150,000 satisfied customers in more than 100 countries offer proof of our commitment to excellent design, quality and cost efficiency. Short delivery times are ensured due to our complete inhouse production and our wide variety of standard furnaces.

At the ARABLAB Nabertherm will present advanced products for laboratory and analysis technology.

Nabertherm not only continuously develops its existing products but also works constantly on developing new product families. For example, this year the company introduced a family of compact, well-priced muffle furnaces for a maximum temperature of 1400 °C. The familiar high-temperature furnaces with SiC heating were extended with a larger model with a capacity of 16 liters. Another new product is a compact oven with a volume of 30 liters to complement the TR product group. The new ashing furnaces in the L..BO series are a particular highlight. These furnaces have an integrated post combustion system to incinerate and clean the organic exhaust gases that are produced.

Nabertherm uses only insulation materials that are not classified as carcinogenic according to TRGS 905, Class 1 or 2 in the production of its furnaces. This change in the range was already implemented two years ago. Consequently, Nabertherm remains a pioneer in the area of furnace production technology.
