

## New regulation about cooling gases

Ortoalresa wants to celebrate its 70<sup>th</sup> anniversary with the launching of several new products. As a manufacturer, Ortoalresa offers a complete range of centrifuges worldwide. On the other hand, the commitment to excellent quality and cost efficiency, service, short delivery time and innovation offers to the customers a reliable supplier.

The biggest effort done along last year is about the product sustainability: due to the human actions the environment is being affected. Along last 2 years Ortoalresa had been working on solutions for use gases with the lowest impact for ozone depleting and anticipate to the new international regulation about the use of gases.

Facing the imminent entry into force of this new regulation that affects refrigerated centrifuges, our Export Manager will impart one of the Seminars held during the exhibition, "New regulation impact in laboratory centrifuges", on Thursday 14th of March. During the seminar the attendees will be informed about the current situation, the changes that are going to be implemented and how to face them.

Along Arablab 2019 Ortoalresa will display the centrifuge Bioprocent 22 R with all its rotors; one centrifuge for several solutions. Microtiter plates rotors, microtubes (individual and strips) and rotor for conical tubes of 50 ml are best accessories for those labs which search several options in one solution.
